## Editorial....

*Penning down your views and concerns on agriculture in general, through the instrument of **Rashtriya Krishi** has always given us a sense of pride, pleasure and responsibility. We are at a critical junction in the history of development of science because the socio-economic planners are increasingly realising their mistake of not doing enough for the growth of agriculture, which, in its modest ways, has done wonders for rejuvenating the economic development of our people. Our agriculture is loosing global competitive edge and this may hurt our national growth in the long run. **Hind Agri-Horticultural Society**, promises corrective measure in this regards. It is now our duty as knowledgeable scientists/technologists stay alert and guide the society to be able to decide upon the correct priorities for keeping agriculture a dynamic instrument of national development.*
